GET

/api/v1/predictions/next_48_hours

Retrieves one day prediction

Day-Ahead market price in Euro/KWh with taxes applied like so: $(\text{price} + \text{fixed_cost}) * (1 + \text{vat} / 100.0)$. Based on EPEX SPOT Day-Ahead prices. Intraday markets are not supported. If actual price data is already available from EPEX SPOT, it will be used. The remaining hours will be filled with predicted prices.

Parameters

Try it out

Name	Description
