

Trading Dashboard Refactor Prompt

Date: June 13, 2026 | **Focus:** Energy Trading Dashboard | **Format:** XLSX Export

Overview

You are refactoring a trading dashboard (energy market focused - FIX, TSO, Weekly trades). The goal is to improve information density and user workflow by enhancing the summary, adding filtered visualizations, removing unused tables, and adding an Excel export mechanism for hourly trade imports.

Requirement 1: Expand Summary Section (1 → 3 Lines)

Current State: Single-line summary with metrics

Desired State: Three-line summary display with better visual hierarchy

The summary should display:

Line 1: Trading Performance Overview

- Total PnL (color-coded: green for positive, red for negative)
- Win Rate / Hit Rate (percentage)

Line 2: Volume Metrics

- Total Volume [MWh]
- Average Trade Size [MW]

Line 3: Breakdown by Segment

- FIX: [PnL value] | [Volume]
- TSO: [PnL value] | [Volume]
- WEEKLY: [PnL value] | [Volume]

Requirement 2: P&L; Diagram with Filter Checkboxes

Current State: Single P&L; chart (Daily and Monthly views)

Desired State:

Add a **filter control bar** above the chart with 4 checkboxes:

- FIX
- TSO
- WEEKLY
- ALL

Default state: FIX is checked by default, others are unchecked

Keep existing Daily/Monthly toggle beside the checkboxes

Chart updates in real-time as user checks/unchecks options

Show only P&L; lines for selected segments

Requirement 3: Remove Unused Tables

Delete the following table sections:

1. "By Day" Table

- Remove the daily breakdown table entirely
- If daily data is needed, keep it only in the P&L; chart

2. "List of Trades" Table

- Remove the detailed trades list table
- Trades data is now accessible only through the export mechanism

Requirement 4: Trade Import & Excel Export Mechanism

New Feature: Create an import/export panel for hourly trade imports

User Workflow:

1. User clicks "Import Trades" button
2. A modal/panel appears with:

Segment Selection Checkboxes:

- FIX (checked by default)
- TSO (unchecked by default)
- WEEKLY (unchecked by default)

Time Range Selector:

- Date range picker (from/to dates)
- Optionally: Time range within day (00:00 - 23:00)

Additional Controls:

- Preview: Show row count of trades that will be exported
- Export Button: "Download Excel File"

3. Excel File Output:

- File name: *Trades_[DATE]_[SEGMENTS].xlsx*
- Example: *Trades_2026-06-13_FIX-TSO-WEEKLY.xlsx*
- Data columns: Use all relevant columns from your existing dataset/database

Summary Sheet includes:

- Export timestamp
- Date range covered
- Total rows by segment

Implementation Notes

State Management: Track selected segments globally so filters affect both summary and chart

Color Coding: Maintain current color scheme (no changes to existing styling)

Responsive Design: Ensure filter checkboxes and buttons are touch-friendly on mobile

Data Binding: Update all visualizations when filter state changes

Performance: Ensure chart re-renders efficiently with large datasets

Database Integration: Query trades by selected segments and date range from your existing database

Acceptance Criteria

- ✓ Summary expands to 3 lines with all required metrics
- ✓ P&L; chart displays filter checkboxes (FIX checked by default)
- ✓ Chart updates in real-time when filters change
- ✓ "By Day" table is removed
- ✓ "List of Trades" table is removed
- ✓ Import/Export modal works and generates Excel files
- ✓ Users can select FIX/TSO/WEEKLY segments for export
- ✓ Excel file includes all necessary columns and summary sheet
- ✓ No visual or functional regressions in existing features
